

FTJ Storage Project: Institutional & Mentor Outreach Templates

Direct LinkedIn message copy tailored for Incubation Managers, Academic Heads, and Enterprise Engineers.

1. Contact: Thadana Tarun Tej

Role: TBI Manager | IIT Kharagpur (Startup Acceleration & Innovation Funding)

Goal: Connect with the gatekeeper for DST NIDHI-PRAYAS (Rs 10L grant) and cohort intake.

Hi Tarun,

I came across your profile and work driving startup acceleration at IIT Kharagpur TBI.

I am an 18-year-old student innovator based in Kolkata. I have built a hardware controller and C++ simulation engine for next-generation Ferroelectric (FTJ) semiconductor storage, designed to eliminate SSD wear-out under heavy AI workloads.

I am preparing our prototype validation plan and would love to know if IIT KGP TBI is currently accepting applications for the upcoming **DST NIDHI-PRAYAS** or deep-tech incubation cohorts.

Here is our open repository and architecture overview: <https://github.com/peter14l/ftj-ssd-sim>

Would appreciate any guidance on the application timeline for young hardware innovators.

Best regards,

[Your Name]

2. Contact: Prof. Som Banerjee

Role: HoD Entrepreneurship | Head Incubation | Research Scholar IIT KGP

Goal: Institutional authority endorsement & direct referral to program coordinators.

Respected Prof. Banerjee,

Greetings. I came across your leadership in entrepreneurship and incubation initiatives at IIT Kharagpur.

I am an 18-year-old developer from Kolkata working on semiconductor storage architectures. I've developed an open-source hardware simulator and synthesizable Verilog controller modeling Ferroelectric memory (FTJ) to prevent memory degradation in high-throughput AI workloads.

As a young innovator from Bengal, I am eager to align our hardware validation under IIT Kharagpur's incubation ecosystem (via NIDHI-PRAYAS / TIDE 2.0).

Would be grateful for your brief advice or a referral to the appropriate program coordinator at the incubation cell:

<https://github.com/peter14l/ftj-ssd-sim>

Thank you for your time and guidance.

Warm regards,

[Your Name]

3. Contact: Enterprise Storage / Firmware Engineers (Western Digital, Samsung, Marvell)

Target Role: Principal Storage Architect / Senior Firmware Engineer (Bangalore / Pune / US)

Goal: Obtain technical feedback on queue logic and initiate early Soft IP evaluation talks.

Hi [Name],

I saw your work on storage systems and controller firmware at [Company].

I'm an 18-year-old developer from Kolkata. I've built an open-source hardware simulator and synthesizable Verilog controller modeling Ferroelectric (FTJ) memory to solve write wear-out and latency jitter in next-gen storage.

I'm not selling anything—I'd just be grateful for 5 minutes of your critical feedback on my queue depth scaling and ECC state machine logic: **<https://github.com/peter14l/ftj-ssd-sim>**

Would love to hear your thoughts if you have a moment!

Best regards,

[Your Name]

Outreach Tip: Customize [Your Name] and [Company] before sending. Always ensure your LinkedIn profile lists your project link in your featured section.
